

MODEL G0755 HEAVY-DUTY MILL/DRILL w/STAND & POWER FEED

OWNER'S MANUAL

(For models manufactured since 1/13)

COPYRIGHT © APRIL, 2013 BY GRIZZLY INDUSTRIAL, INC., REVISED JANUARY, 2014 (TS) WARNING: NO PORTION OF THIS MANUAL MAY BE REPRODUCED IN ANY SHAPE OR FORM WITHOUT THE WRITTEN APPROVAL OF GRIZZLY INDUSTRIAL, INC.

#TS15627 PRINTED IN CHINA

This manual provides critical safety instructions on the proper setup, operation, maintenance, and service of this machine/tool. Save this document, refer to it often, and use it to instruct other operators.

Failure to read, understand and follow the instructions in this manual may result in fire or serious personal injury—including amputation, electrocution, or death.

The owner of this machine/tool is solely responsible for its safe use. This responsibility includes but is not limited to proper installation in a safe environment, personnel training and usage authorization, proper inspection and maintenance, manual availability and comprehension, application of safety devices, cutting/sanding/grinding tool integrity, and the usage of personal protective equipment.

The manufacturer will not be held liable for injury or property damage from negligence, improper training, machine modifications or misuse.

Some dust created by power sanding, sawing, grinding, drilling, and other construction activities contains chemicals known to the State of California to cause cancer, birth defects or other reproductive harm. Some examples of these chemicals are:

- Lead from lead-based paints.
- Crystalline silica from bricks, cement and other masonry products.
- Arsenic and chromium from chemically-treated lumber.

Your risk from these exposures varies, depending on how often you do this type of work. To reduce your exposure to these chemicals: Work in a well ventilated area, and work with approved safety equipment, such as those dust masks that are specially designed to filter out microscopic particles.

INTRODUCTION

Machine Description

The Model G0755 is a free-standing mill/drill that strikes a great balance between being heavy-duty and high-precision.

The spindle is equipped with precision P5 spindle bearings and is driven by an oil-bath-lubricated and gear-driven headstock. The spindle is fully reversible and features both coarse and fine downfeed controls. The six spindle speeds range from 90–1970 RPM and are controlled by convenient gear-change levers.

The headstock tilts 90° left/right and moves in the Z-axis along precision dovetailed ways—with both manual and powered elevation control. The table also features both manual and powered X-axis control, but with a manually-controlled Y-axis. All table movement is along scraped dovetail ways.

Contact Info

We stand behind our machines. If you have any questions or need help, use the information below to contact us. Before contacting, please get the serial number and manufacture date of your machine. This will help us help you faster.

Grizzly Technical Support 1203 Lycoming Mall Circle Muncy, PA 17756 Phone: (570) 546-9663 Email: techsupport@grizzly.com

We want your feedback on this manual. What did you like about it? Where could it be improved? Please take a few minutes to give us feedback.

Grizzly Documentation Manager P.O. Box 2069 Bellingham, WA 98227-2069 Email: manuals@grizzly.com

Manual Accuracy

We are proud to provide a high-quality owner's manual with your new machine!

We made every effort to be exact with the instructions, specifications, drawings, and photographs contained inside. Sometimes we make mistakes, but our policy of continuous improvement also means that sometimes the machine you receive will be slightly different than what is shown in the manual.

If you find this to be the case, and the difference between the manual and machine leaves you confused about a procedure, check our website for an updated version. We post current manuals and manual updates for free on our website at www.grizzly.com.

Alternatively, you can call our Technical Support for help. Before calling, please write down the **Manufacture Date** and **Serial Number** stamped into the machine ID label (see below). This information helps us determine if updated documentation is available for your machine.

Identification

AWARNING

To reduce your risk of serious injury, read this entire manual BEFORE using machine.

Adjustable Spindle Depth Stop
Reversible Spindle Rotation for Tapping Operations
High-Precision P5 (ABEC-5 Equivalent) Spindle Bearings
Dovetail Column
Scraped Dovetail Ways
Made in ISO 9001 Factory

SECTION 1: SAFETY

For Your Own Safety, Read Instruction **Manual Before Operating This Machine**

The purpose of safety symbols is to attract your attention to possible hazardous conditions. This manual uses a series of symbols and signal words intended to convey the level of importance of the safety messages. The progression of symbols is described below. Remember that safety messages by themselves do not eliminate danger and are not a substitute for proper accident prevention measures. Always use common sense and good judgment.

Indicates an imminently hazardous situation which, if not avoided, WILL result in death or serious injury.

AWARNING Indicates a potentially hazardous situation which, if not avoided, COULD result in death or serious injury.

▲CAUTION

Indicates a potentially hazardous situation which, if not avoided, MAY result in minor or moderate injury. It may also be used to alert against unsafe practices.

NOTICE

This symbol is used to alert the user to useful information about proper operation of the machine.

Safety Instructions for Machinery

AWARNING

OWNER'S MANUAL. Read and understand this owner's manual BEFORE using machine.

TRAINED OPERATORS ONLY. Untrained operators have a higher risk of being hurt or killed. Only allow trained/supervised people to use this machine. When machine is not being used, disconnect power, remove switch keys, or lock-out machine to prevent unauthorized use—especially around children. Make workshop kid proof!

DANGEROUS ENVIRONMENTS. Do not use machinery in areas that are wet, cluttered, or have poor lighting. Operating machinery in these areas greatly increases the risk of accidents and injury.

MENTAL ALERTNESS REQUIRED. Full mental alertness is required for safe operation of machinery. Never operate under the influence of drugs or alcohol, when tired, or when distracted.

ELECTRICAL EQUIPMENT INJURY RISKS. You can be shocked, burned, or killed by touching live electrical components or improperly grounded machinery. To reduce this risk, only allow qualified service personnel to do electrical installation or repair work, and always disconnect power before accessing or exposing electrical equipment.

DISCONNECT POWER FIRST. Always disconnect machine from power supply BEFORE making adjustments, changing tooling, or servicing machine. This prevents an injury risk from unintended startup or contact with live electrical components.

EYE PROTECTION. Always wear ANSI-approved safety glasses or a face shield when operating or observing machinery to reduce the risk of eye injury or blindness from flying particles. Everyday eyeglasses are NOT approved safety glasses.

AWARNING

WEARING PROPER APPAREL. Do not wear clothing, apparel or jewelry that can become entangled in moving parts. Always tie back or cover long hair. Wear non-slip footwear to avoid accidental slips, which could cause loss of work-piece control.

HAZARDOUS DUST. Dust created while using machinery may cause cancer, birth defects, or long-term respiratory damage. Be aware of dust hazards associated with each workpiece material, and always wear a NIOSH-approved respirator to reduce your risk.

HEARING PROTECTION. Always wear hearing protection when operating or observing loud machinery. Extended exposure to this noise without hearing protection can cause permanent hearing loss.

REMOVE ADJUSTING TOOLS. Tools left on machinery can become dangerous projectiles upon startup. Never leave chuck keys, wrenches, or any other tools on machine. Always verify removal before starting!

USE CORRECT TOOL FOR THE JOB. Only use this tool for its intended purpose—do not force it or an attachment to do a job for which it was not designed. Never make unapproved modifications—modifying tool or using it differently than intended may result in malfunction or mechanical failure that can lead to personal injury or death!

AWKWARD POSITIONS. Keep proper footing and balance at all times when operating machine. Do not overreach! Avoid awkward hand positions that make workpiece control difficult or increase the risk of accidental injury.

CHILDREN & BYSTANDERS. Keep children and bystanders at a safe distance from the work area. Stop using machine if they become a distraction.

GUARDS & COVERS. Guards and covers reduce accidental contact with moving parts or flying debris. Make sure they are properly installed, undamaged, and working correctly.

FORCING MACHINERY. Do not force machine. It will do the job safer and better at the rate for which it was designed.

NEVER STAND ON MACHINE. Serious injury may occur if machine is tipped or if the cutting tool is unintentionally contacted.

STABLE MACHINE. Unexpected movement during operation greatly increases risk of injury or loss of control. Before starting, verify machine is stable and mobile base (if used) is locked.

USE RECOMMENDED ACCESSORIES. Consult this owner's manual or the manufacturer for recommended accessories. Using improper accessories will increase the risk of serious injury.

UNATTENDED OPERATION. To reduce the risk of accidental injury, turn machine *OFF* and ensure all moving parts completely stop before walking away. Never leave machine running while unattended.

MAINTAIN WITH CARE. Follow all maintenance instructions and lubrication schedules to keep machine in good working condition. A machine that is improperly maintained could malfunction, leading to serious personal injury or death.

CHECK DAMAGED PARTS. Regularly inspect machine for any condition that may affect safe operation. Immediately repair or replace damaged or mis-adjusted parts before operating machine.

MAINTAIN POWER CORDS. When disconnecting cord-connected machines from power, grab and pull the plug—NOT the cord. Pulling the cord may damage the wires inside. Do not handle cord/plug with wet hands. Avoid cord damage by keeping it away from heated surfaces, high traffic areas, harsh chemicals, and wet/damp locations.

EXPERIENCING DIFFICULTIES. If at any time you experience difficulties performing the intended operation, stop using the machine! Contact our Technical Support at (570) 546-9663.

AWARNINGAdditional Safety for Mill/Drills

UNDERSTANDING CONTROLS. Make sure you understand the use and operation of all controls before starting the mill/drill.

SAFETY ACCESSORIES. To reduce the risk of injury from flying chips, always use a face shield in addition to safety glasses when using the mill/drill.

CLEAN-UP. Metal chips can cut your hands. DO NOT clear chips by hand or compressed air that can force the chips farther into the machine. Use a brush or vacuum, and never clear chips while the spindle is turning.

SECURING TOOLING. Objects that are thrown by the spinning action of the mill/drill can be deadly missiles. Always firmly secure the cutting tool before starting the machine. Always remove the chuck key, drawbar wrench, and any tools immediately after use.

CUTTING TOOL INSPECTION. Inspect cutting tools for sharpness, chips, or cracks before each use. Replace dull, chipped, or cracked cutting tools immediately. Handle cutting tools with care. Leading edges are very sharp and can cause lacerations.

STOPPING SPINDLE. Serious injury may occur if you try to stop the moving spindle by hand. DO NOT stop the spindle using your hand or any other object. Allow the spindle to stop on its own.

WORK HOLDING. A workpiece that moves unexpectedly during operation can be ejected from the machine, causing personal injury or property damage. Before starting the machine, be certain the workpiece is properly clamped to the table. NEVER hold the workpiece by hand during operation.

MACHINE CARE AND MAINTENANCE. Never operate the mill/drill with damaged or worn parts that can break apart during operation. Maintain your mill/drill in proper working condition. Perform routine inspections and maintenance promptly. Put tools away after use.

MAINTENANCE/ADJUSTMENTS. To avoid possible electrocution or physical injury, make sure the mill is turned *OFF*, disconnected from power, and all moving parts have come to a complete stop before changing cutting tools or starting any inspection, adjustment or maintenance procedure.

SPINDLE SPEEDS. For safe and good results, select the spindle speed that is correct for the type of work and material. Allow the spindle to reach full speed before beginning a cut.

POWER DISRUPTION. In the event of a local power outage during operation, turn spindle switch *OFF* to avoid a possible sudden start up once power is restored.

AWARNING

Like all machinery there is potential danger when operating this machine. Accidents are frequently caused by lack of familiarity or failure to pay attention. Use this machine with respect and caution to decrease the risk of operator injury. If normal safety precautions are overlooked or ignored, serious personal injury may occur.

CAUTION

No list of safety guidelines can be complete. Every shop environment is different. Always consider safety first, as it applies to your individual working conditions. Use this and other machinery with caution and respect. Failure to do so could result in serious personal injury, damage to equipment, or poor work results.

SECTION 2: POWER SUPPLY

Availability

Before installing the machine, consider the availability and proximity of the required power supply circuit. If an existing circuit does not meet the requirements for this machine, a new circuit must be installed. To minimize the risk of electrocution, fire, or equipment damage, installation work and electrical wiring must be done by an electrican or qualified service personnel in accordance with all applicable codes and standards.

AWARNING

Electrocution, fire, or equipment damage may occur if machine is not correctly grounded and connected to the power supply.

Full-Load Current Rating

The full-load current rating is the amperage a machine draws at 100% of the rated output power. On machines with multiple motors, this is the amperage drawn by the largest motor or sum of all motors and electrical devices that might operate at one time during normal operations.

Full-Load Current Rating at 220V 9.4 Amps

The full-load current is not the maximum amount of amps that the machine will draw. If the machine is overloaded, it will draw additional amps beyond the full-load rating.

If the machine is overloaded for a sufficient length of time, damage, overheating, or fire may result—especially if connected to an undersized circuit. To reduce the risk of these hazards, avoid overloading the machine during operation and make sure it is connected to a power supply circuit that meets the requirements in the following section.

Circuit Requirements for 220V

This machine is prewired to operate on a 220V power supply circuit that has a verified ground and meets the following requirements:

Nominal Voltage	220V
Cycle	60 Hz
Phase	1-Phase
Power Supply Circuit	15 Amps
Plug/Receptacle	NEMA 6-15

A power supply circuit includes all electrical equipment between the breaker box or fuse panel in the building and the machine. The power supply circuit used for this machine must be sized to safely handle the full-load current drawn from the machine for an extended period of time. (If this machine is connected to a circuit protected by fuses, use a time delay fuse marked D.)

ACAUTION

For your own safety and protection of property, consult an electrician if you are unsure about wiring practices or electrical codes in your area.

Note: The circuit requirements listed in this manual apply to a dedicated circuit—where only one machine will be running at a time. If this machine will be connected to a shared circuit where multiple machines will be running at the same time, consult a qualified electrician to ensure that the circuit is properly sized for safe operation.

Grounding Instructions

This machine MUST be grounded. In the event of certain malfunctions or breakdowns, grounding reduces the risk of electric shock by providing a path of least resistance for electric current.

The power cord and plug specified under "Circuit Requirements for 220V" on the previous page has an equipment-grounding wire and a grounding prong. The plug must only be inserted into a matching receptacle (outlet) that is properly installed and grounded in accordance with all local codes and ordinances (see figure below).

Figure 1. Typical 6-15 plug and receptacle.

AWARNING

Serious injury could occur if you connect the machine to power before completing the setup process. DO NOT connect to power until instructed later in this manual.

No adapter should be used with the required plug. If the plug does not fit the available receptacle, or the machine must be reconnected for use on a different type of circuit, the reconnection must be made by a qualified electrician and comply with all local codes and ordinances.

AWARNING

Serious injury could occur if you connect the machine to power before completing the setup process. DO NOT connect to power until instructed later in this manual.

Improper connection of the equipment-grounding wire can result in a risk of electric shock. The wire with green insulation (with or without yellow stripes) is the equipment-grounding wire. If repair or replacement of the power cord or plug is necessary, do not connect the equipment-grounding wire to a live (current carrying) terminal.

Check with a qualified electrician or service personnel if you do not understand these grounding requirements, or if you are in doubt about whether the tool is properly grounded. If you ever notice that a cord or plug is damaged or worn, disconnect it from power, and immediately replace it with a new one.

Extension Cords

We do not recommend using an extension cord with this machine. If you must use an extension cord, only use it if absolutely necessary and only on a temporary basis.

Extension cords cause voltage drop, which may damage electrical components and shorten motor life. Voltage drop increases as the extension cord size gets longer and the gauge size gets smaller (higher gauge numbers indicate smaller sizes).

Any extension cord used with this machine must contain a ground wire, match the required plug and receptacle, and meet the following requirements:

Minimum Gauge Size14 AWG Maximum Length (Shorter is Better)......50 ft.

SECTION 3: SETUP

Unpacking

Your machine was carefully packaged for safe transportation. Remove the packaging materials from around your machine and inspect it. If you discover any damage, please call us immediately at (570) 546-9663 for advice.

Save the containers and all packing materials for possible inspection by the carrier or its agent. Otherwise, filing a freight claim can be difficult.

When you are completely satisfied with the condition of your shipment, inventory the contents.

Dagarindian

WARNING

SUFFOCATION HAZARD! Keep children and pets away from plastic bags or packing materials shipped with this machine. Discard immediately.

Needed for Setup

The following are needed to complete the setup process, but are not included with your machine.

Des	scription Qty
•	Additional People2
•	Safety Glasses 1 Per Person
•	Cleaner/Degreaser (Page 12) As Needed
•	Disposable Shop Rags As Needed
•	Forklift (rated for at least 1500 lbs.)
•	Solid Steel Rod 1" Dia. x 42" L2
•	Slotted Screwdriver #2 1

Inventory

The following is a list of items shipped with your machine. Before beginning setup, lay these items out and inventory them.

If any non-proprietary parts are missing (e.g. a nut or a washer), we will gladly replace them; or for the sake of expediency, replacements can be obtained at your local hardware store.

Sm	all Item Inventory (Figure 2): Qty
A.	Handwheel Handles w/Screws2
B.	T-Bolts M12-1.75 x 55 w/Washers & Nuts 2
C.	Bottle for Oil1
D.	Toolbox 1
E.	Open-End Wrenches 17/19, 22/24mm1 Ea
F.	Hex Wrench Set 2.5, 3, 4, 5, 10mm1 Ea
G.	Drift Key 1
Н.	Drill Chuck B16, 1–13mm w/Chuck Key 1
I.	Spindle Sleeve R-8–MT#3 1
J.	Drill Chuck Arbor R-8–B161
K.	Spindle Sleeve MT#3-MT#21

Figure 2. Small item inventory.

NOTICE

If you cannot find an item on the inventory list, carefully check around/inside the machine and packaging materials. Often, these items get lost in packaging materials while unpacking or they are pre-installed at the factory.

Cleanup

The unpainted surfaces of your machine are coated with a heavy-duty rust preventative that prevents corrosion during shipment and storage. This rust preventative works extremely well, but it will take a little time to clean.

Be patient and do a thorough job cleaning your machine. The time you spend doing this now will give you a better appreciation for the proper care of your machine's unpainted surfaces.

There are many ways to remove this rust preventative, but the following steps work well in a wide variety of situations. Always follow the manufacturer's instructions with any cleaning product you use and make sure you work in a well-ventilated area to minimize exposure to toxic fumes.

Before cleaning, gather the following:

- Disposable rags
- Cleaner/degreaser (WD•40 works well)
- Safety glasses & disposable gloves
- Plastic paint scraper (optional)

Basic steps for removing rust preventative:

- **1.** Put on safety glasses.
- 2. Coat the rust preventative with a liberal amount of cleaner/degreaser, then let it soak for 5–10 minutes.
- Wipe off the surfaces. If your cleaner/degreaser is effective, the rust preventative will wipe off easily. If you have a plastic paint scraper, scrape off as much as you can first, then wipe off the rest with the rag.
- **4.** Repeat **Steps 2–3** as necessary until clean, then coat all unpainted surfaces with a quality metal protectant to prevent rust.

WARNING

Gasoline and petroleum products have low flash points and can explode or cause fire if used to clean machinery. Avoid using these products to clean machinery.

ACAUTION

Many cleaning solvents are toxic if inhaled. Only work in a well-ventilated area.

NOTICE

Avoid chlorine-based solvents, such as acetone or brake parts cleaner, that may damage painted surfaces.

T23692—Orange Power Degreaser

A great product for removing the waxy shipping grease from your machine during clean up.

Figure 3. T23692 Orange Power Degreaser.

Site Considerations

Weight Load

Refer to the **Machine Data Sheet** for the weight of your machine. Make sure that the surface upon which the machine is placed will bear the weight of the machine, additional equipment that may be installed on the machine, and the heaviest workpiece that will be used. Additionally, consider the weight of the operator and any dynamic loading that may occur when operating the machine.

Space Allocation

Consider the largest size of workpiece that will be processed through this machine and provide enough space around the machine for adequate operator material handling or the installation of auxiliary equipment. With permanent installations, leave enough space around the machine to open or remove doors/covers as required by the maintenance and service described in this manual. See below for required space allocation.

ACAUTION

Children or untrained people may be seriously injured by this machine. Only install in an access restricted location.

Physical Environment

The physical environment where the machine is operated is important for safe operation and longevity of machine components. For best results, operate this machine in a dry environment that is free from excessive moisture, hazardous chemicals, airborne abrasives, or extreme conditions. Extreme conditions for this type of machinery are generally those where the ambient temperature range exceeds 41°–104°F; the relative humidity range exceeds 20–95% (non-condensing); or the environment is subject to vibration, shocks, or bumps.

Electrical Installation

Place this machine near an existing power source. Make sure all power cords are protected from traffic, material handling, moisture, chemicals, or other hazards. Make sure to leave enough space around machine to disconnect power supply or apply a lockout/tagout device, if required.

Lighting

Lighting around the machine must be adequate enough that operations can be performed safely. Shadows, glare, or strobe effects that may distract or impede the operator must be eliminated.

Figure 4. Minimum working clearances.

Lifting & Placing

AWARNING

HEAVY LIFT!

Straining or crushing injury may occur from improperly lifting machine or some of its parts. To reduce this risk, get help from other people and use a fork lift (or other lifting equipment) rated for weight of this machine.

Power lifting equipment, steel rods (refer to **Page 11**), and at least two other people are required to lift and place the mill.

To move your machine into position:

- 1. Remove outside crating material from shipping crate, but leave machine bolted to pallet (for now).
- 2. Move machine next to its intended installation location, then unbolt it from pallet.
- To help balance machine during moving, position table as close to column as possible, and adjust headstock to its *lowest* position.

4. Insert steel rods into holes in stand, as shown in **Figure 5**.

Figure 5. Lifting setup.

Evenly position forklift forks under steel rods on each side of cabinet.

Note: Before next step, make sure all locks are tight to avoid sudden shifts which could unbalance machine.

6. With help of additional people to steady load, slowly lift machine, remove pallet, then lower machine into position.

Anchoring to Floor

Anchoring machinery to the floor prevents tipping or shifting and reduces vibration that may occur during operation, resulting in a machine that runs slightly quieter and feels more solid.

If the machine will be installed in a commercial or workplace setting, or if it is permanently connected (hardwired) to the power supply, local codes may require that it be anchored to the floor.

If not required by any local codes, fastening the machine to the floor is an optional step. If you choose not to do this with your machine, we recommend placing it on machine mounts, as these provide an easy method for leveling and they have vibration-absorbing pads.

Anchoring to Concrete Floors

Lag shield anchors with lag screws (see below) are a popular way to anchor machinery to a concrete floor, because the anchors sit flush with the floor surface, making it easy to unbolt and move the machine later, if needed. However, anytime local codes apply, you MUST follow the anchoring methodology specified by the code.

Figure 6. Popular method for anchoring machinery to a concrete floor.

Assembly

Except for the handwheel handles, the mill/drill was fully assembled at the factory.

Use a slotted screwdriver to attach the handwheel handles, as shown in **Figure 7**.

Figure 7. Handwheel handles attached.

Joining Drill Chuck & Arbor

An arbor is included for the drill chuck that comes with this machine. The following procedure describes how to install the arbor in the chuck.

After the arbor is installed in the drill chuck, it is very difficult to separate the assembly. If you would like to use a different chuck in the future, we recommend obtaining a new arbor.

Important: DO NOT install the drill chuck and arbor assembly into the spindle until AFTER the test run.

To join the drill chuck and arbor:

- Use acetone or lacquer thinner to clean drill chuck and arbor mating surfaces, especially the bore.
- 2. Retract chuck jaws completely into chuck.
- 3. Insert small end of arbor into chuck.
- Hold assembly by the arbor and tap chuck onto a block of wood with medium force, as illustrated in Figure 8.

Figure 8. Tapping drill chuck/arbor on block of wood.

5. Attempt to separate drill chuck and arbor by hand—if they separate, repeat **Steps 3–4**.

Lubricating Mill/Drill

The headstock oil reservoir must be properly filled with oil before the mill/drill can be operated for the first time.

Damage caused by running the mill/drill without the proper amount of oil in the reservoir will not be covered under warranty. Refer to the **Lubrication** section, beginning on **Page 30**, for details on how to check and add oil.

Test Run

The purpose of the test run is to verify that the machine functions properly and is ready for regular operation.

Before beginning this procedure, make sure: (1) you understand the safety instructions at the beginning of this manual, (2) the machine is set up properly, and (3) all tools and objects used during setup are cleared away from the machine.

IMPORTANT: If the machine or its components do not function as described, or if the machine has unusual noises or vibrations, immediately turn it *OFF* and disconnect power.

For your convenience, a **Troubleshooting** table is provided on **Page 35**. If you cannot find a remedy, contact our Tech Support at (570) 546-9663 for assistance.

To test run the machine:

1. Push Emergency Stop button (see **Figure 9**).

Figure 9. Control panel.

- 2. Rotate Elevation Power Feed switch to OFF.
- **3.** Connect machine to power source by inserting power cord plug into matching receptacle.

4. Twist Emergency Stop button clockwise until it pops out—this resets the switch so the machine can be started (see **Figure 10**).

Figure 10. Resetting the switch.

- **5.** Push the Power Lamp/ON button to enable power to the motor—the lamp should light.
- **6.** Push Spindle Forward button to start machine. A correctly operating machine runs smoothly with little or no vibration or rubbing noises.
- **7.** Press Emergency Stop button to stop machine.
- **8.** WITHOUT resetting Emergency Stop button, press Spindle Forward button—the machine should not start.
 - —If the machine *does* start (with the Emergency Stop button pushed in), immediately disconnect machine from power.

The Emergency Stop button safety feature is not working correctly. This safety feature must work properly before proceeding with regular operations. Call Tech Support for help.

Reset Emergency Stop button and use Elevation Power Feed switch to raise and lower headstock.

The Test Run is complete. Before beginning any regular operations, perform the **Spindle Break-In** procedure on the next page.

Spindle Break-In

Before placing operational loads on the spindle, complete this break-in procedure to fully distribute lubrication throughout the bearings and ensure trouble-free performance.

NOTICE

Failure to complete the spindle break-in process may lead to premature failure of the bearings—this will not be covered under warranty.

To perform the spindle break-in procedure:

 Make sure the spindle is completely stopped, then set spindle speed to 90 RPM (refer to Page 26 for detailed instructions).

NOTICE

Do not leave the mill/drill unattended during the Spindle Break-In procedure. If your attention is needed elsewhere during this procedure, stop the mill/drill and restart the procedure later from the beginning.

- 2. Run machine for a minimum of 10 minutes.
- **3.** Repeat **Step 2** for each spindle speed, working to progressively higher speeds.

Note: If the machine is new, we recommend changing the headstock oil while it is still warm and any particles from the manufacturing process are still in suspension (refer to **Page 31** in the **Lubrication** subsection for detailed instructions).

The spindle break-in is now complete!

Inspections & Adjustments

The following list of adjustments were performed at the factory before the machine was shipped:

)	Gib Adjustments	.Page	37
•	Leadscrew Backlash		
	Adjustments	.Page	37
)	Return Spring Tension	Page	40

Be aware that machine components can shift during the shipping process. Pay careful attention to these adjustments during operation of the machine. If you find that the adjustments are not set according to the procedures in this manual or your personal preferences, re-adjust them.

SECTION 4: OPERATIONS

Operation Overview

The purpose of this overview is to provide the novice machine operator with a basic understanding of how the machine is used during operation, so the machine controls/components discussed later in this manual are easier to understand.

Due to the generic nature of this overview, it is **not** intended to be an instructional guide. To learn more about specific operations, read this entire manual and seek additional training from experienced machine operators, and do additional research outside of this manual by reading "how-to" books, trade magazines, or websites.

AWARNING

To reduce your risk of serious injury, read this entire manual BEFORE using machine.

AWARNING

To reduce risk of eye or face injury from flying chips, always wear approved safety glasses and a face shield when operating this machine.

NOTICE

If you are not experienced with this type of machine, WE STRONGLY RECOMMEND that you seek additional training outside of this manual. Read books/magazines or get formal training before beginning any projects. Regardless of the content in this section, Grizzly Industrial will not be held liable for accidents caused by lack of training.

To complete a typical operation, the operator does the following:

- Examines workpiece to make sure it is suitable for cutting.
- 2. Puts on protective gear.
- **3.** Securely clamps workpiece to table.
- **4.** With machine disconnected from power, installs correct cutting tool.
- **5.** Adjusts headstock height above table.
- 6. Without the machine running, checks range of table or spindle movement to make sure setup is safe and correct for operation.
- 7. Selects correct spindle speed.
- 8. Connects machine to power and turns it ON.
- **9.** Uses downfeed controls or table controls to perform cutting operation.
- **10.** Turns machine *OFF* and waits for spindle to completely stop before removing workpiece.

Control Panel

Refer to **Figure 11** and the following descriptions to become familiar with the control panel functions.

Figure 11. Control panel components.

- **A.** Power/ON Lamp Button: Lights when machine is connected to power. Push this button to enable power to the motor.
- B. Elevation (Z-Axis) Power Feed Switch: Controls headstock elevation.
- **C. Spindle Reverse Button:** Starts counter-clockwise spindle rotation.
- **D. Emergency Stop Button:** Cuts power to spindle and Z-axis motors. This button does NOT disconnect machine from power.
- **E. Spindle Stop Button:** Stops spindle motor.
- F. Spindle Forward Button: Starts clockwise spindle rotation.

Downfeed Controls

Identification

Figure 12. Downfeed controls.

- A. Fine Downfeed Handwheel
- B. Depth Pointer and Scale
- C. Quill Lock Lever
- D. Depth Pointer Adjustment Knob
- E. Downfeed Selector Knob
- F. Coarse Downfeed Lever

Using Coarse Downfeed

- Loosen downfeed selector knob to engage coarse downfeed levers.
- **2.** Use adjustment knob to adjust depth pointer.
- 3. Use coarse downfeed levers to lower spindle.

Using Fine Downfeed

- **1.** *Tighten* downfeed selector knob to engage fine downfeed handwheel.
- 2. Use adjustment knob to adjust depth pointer.
- 3. Rotate fine downfeed handwheel to raise and lower spindle.

Depth Stop

The depth stop limits the downward movement of the cutting tool. With the use of the depth pointer adjustment knob (see **D** in **Figure 12**), it can be adjusted anywhere within 0"-5". This is useful when performing repeat operations.

Headstock Movement

The headstock travels up and down the column, and tilts 90° left and right relative to the table.

Raising/Lowering Headstock

Loosen the lock handles shown in **Figure 13**, then use the Elevation (Z-Axis) Switch (see **Figure 14**) on the control panel to raise/lower the headstock.

Figure 13. Lock handles for headstock elevation.

Figure 14. Elevation switch that controls motorized head travel.

ACAUTION

The Z-axis crank will rotate rapidly and may cause impact injuries if left attached during powered Z-axis operation. Always remove Z-axis crank before using the switch on the control panel.

The limit stops shown in **Figure 15** stop headstock travel when contacted by the limit block.

Figure 15. Z-axis limit controls.

The headstock can also be raised/lowered by hand using the crank shown in **Figure 16**.

Figure 16. Z-axis crank.

Note: Lock the headstock in place by re-tightening the lock handles before beginning operation to avoid unexpected headstock movement.

Tilting Headstock

1. Use a 22mm wrench to loosen the three locking hex nuts (see **Figures 17–18**), then tilt headstock to desired angle on tilt scale.

Figure 17. Tilt locking hex nut (one on each side of head).

Figure 18. Hex nut underneath head.

2. Lock headstock in place by re-tightening the three hex nuts.

NOTICE

When tilting the head back to 90°, you will need to tram the spindle with the table to ensure a that it is set perfectly. Refer to the *Tramming Spindle* section on *Page 38* for detailed instructions.

Table Travel

The table travels in two directions, as illustrated in **Figure 19**. These movements are controlled by handwheels and the X-axis power feed. When using the power feed, travel is limited by the position of the limit stops along the front of the table.

Figure 19. The directions of table movement.

Graduated Dials

The handwheels have graduated scales that are used to determine table movement in 0.001" increments. One full revolution of the handwheel equals 0.100" of table movement.

Loosen the locking thumb screw shown in **Figure 20**, adjust the graduated dial to "zero" it for a relative starting point, then re-tighten the thumb screw.

Figure 20. Graduated dial and locking thumb screw.

X- & Y-Axis Handwheels

Use **Figure 21** and the following descriptions to become familiar with the X- and Y-axis manual table movement

Figure 21. Table locks and limit stops.

- A. Y-Axis Handwheel: Moves table back and forth.
- **B.** X-Axis Table Locks: Increase rigidity of table when X-axis movement is not required for operation.
- C. Y-Axis Table Lock: Increase rigidity of table when Y -axis movement is not required for operation.
- D. X-Axis Handwheel: Moves table side to side.

X-Axis Power Feed

Use **Figures 22–23** and the following descriptions to become familiar with the power feed controls.

Figure 22. X-axis power feed controls.

Figure 23. Limit switch and limit stops.

- **A. ON/OFF Light:** Lights when unit is turned **ON**.
- **B. Direction Lever:** Controls direction of powered table travel.
- **C. Rapid Switch:** When held down, moves table rapidly in chosen direction.
- **D. Power Light:** Lights when unit is connected to power.
- E. Speed Dial: Controls rate of power feed.
- F. ON/OFF Switch
- **G. X-Axis Limit Stops:** Adjustable along front of table to restrict X-axis table movement, particularly when using the power feed.
- **H.** Limit Switch: Stops power feed when contacted by a limit stop.

Installing/Removing Tooling

The Model G0755 includes the following spindle tools (see **Figure 24**):

- A. B16 Drill Chuck w/R-8 Arbor: Use with drill bits.
- **B.** R-8-MT#3 Spindle Sleeve: Use with MT#3 tooling with or without a tang. Has a drift key slot for tool removal.
- C. MT#3-MT#2 Spindle Sleeve: Use with the R-8-MT#3 spindle sleeve for MT#2 tooling. Has a drift key slot for tool removal.

Figure 24. Drill chuck and arbors included with Model G0755.

ACAUTION

Cutting tools are sharp and can easily cause laceration injuries. Always protect your hands with leather gloves or shop rags when handling cutting tools.

Installing Tool Holder

Tool Needed	Qty
Wrench 19mm	1

To install tool holder:

- DISCONNECT MACHINE FROM POWER!
- 2. Remove drawbar cap as shown in Figure 25.

Figure 25. Drawbar components.

 Align tool holder alignment slot (see Figure 24) with pin inside spindle, then insert tool holder into spindle until it contacts drawbar.

Note: Drawbar height inside spindle can be changed by rotating the adjustment nut (see **Figure 25**).

4. Working from the top, hand-thread drawbar into tool holder until snug, then use a 19mm wrench to tighten it.

Note: DO NOT overtighten drawbar. Overtightening makes tool holder removal difficult and could damage arbor and drawbar threads.

5. Re-install drawbar cap.

Removing Tool Holder

Tools Needed	Qty
Wrench 19mm	1
Brass or Dead Blow Hammer	1

To remove tool holder:

- DISCONNECT MACHINE FROM POWER!
- 2. Remove drawbar cap, and only unthread drawbar from tool holder one full rotation.

Note: Do not fully unthread tool holder from drawbar, or drawbar and tool holder threads could be damaged during the next step.

- **3.** Tap top of drawbar with hammer to unseat taper.
- **4.** Hold onto tool holder with one hand and fully unthread drawbar with the other hand.

Spindle Speed

Using the correct spindle speed is important for safe and satisfactory results, as well as maximizing tool life.

To set the spindle speed for your operation, you will need to: 1) Determine the best spindle speed for the cutting task, and 2) configure the spindle speed levers to produce the required spindle speed.

Determining Spindle Speed

Many variables affect the optimum spindle speed to use for any given operation, but the two most important are the recommended cutting speed for the workpiece material and the diameter of the cutting tool, as noted in the formula shown in **Figure 26**.

Figure 26. Spindle speed formula for mill/drills.

Cutting speed, typically defined in feet per minute (FPM), is the speed at which the edge of a tool moves across the material surface.

A recommended cutting speed is an ideal speed for cutting a type of material in order to produce the desired finish and optimize tool life.

The books Machinery's Handbook or Machine Shop Practice, and some internet sites, provide excellent recommendations for which cutting speeds to use when calculating the spindle speed. These sources also provide a wealth of additional information about the variables that affect cutting speed and they are a good educational resource.

Also, there are a large number of easy-to-use spindle speed calculators that can be found on the internet. These sources will help you take into account the applicable variables in order to determine the best spindle speed for the operation.

Setting Spindle Speed

The chart below explains how to position the spindle range and speed levers to set the desired spindle speed.

Spindle Speed	Range Lever	Speed Lever
90 RPM	L	1
210 RPM	L	2
345 RPM	L	3
670 RPM	Н	1
1180 RPM	Н	2
1970 RPM	Н	3

NOTICE

Change spindle speed ONLY when the spindle is completely stopped. Otherwise, machine damage could occur.

With the spindle completely stopped, position the spindle range and speed levers (see **Figure 27**) to set the spindle speed.

Note: If the levers will not move to the desired position, rotate the spindle by hand while applying pressure on the lever. When the gear teeth align, the lever will move into place.

Figure 27. Spindle speed controls.

SECTION 5: ACCESSORIES

AWARNING

Installing unapproved accessories may cause machine to malfunction, resulting in serious personal injury or machine damage. To reduce this risk, only install accessories recommended for this machine by Grizzly.

NOTICE

Refer to our website or latest catalog for additional recommended accessories.

G1075—52-PC. Clamping Kit for ½" T-Slots

This clamping kit includes 24 studs, 6 step block pairs, 6 T-nuts, 6 flange nuts, 4 coupling nuts, and 6 end hold-downs. The rack is slotted so it can be mounted close to the machine for easy access.

Figure 28. G1075 52-PC. Clamping Kit.

G7066—5" Tilting/Swiveling Milling Vise H7576—Precision Self-Centering Vise

Figure 29. Specialty milling vises.

T23962—ISO 68 Moly-D Way Oil, 5 gal. T23963—ISO 32 Moly-D Machine Oil, 5 gal.

Moly-D oils are some of the best we've found for maintaining the critical components of machinery because they tend to resist run-off and maintain their lubricity under a variety of conditions—as well as reduce chatter or slip. Buy in bulk and save with 5-gallon quantities.

Figure 30. ISO 68 and ISO 32 machine oil.

High Pressure Oil Cans H7616—Plastic Nozzle H7617—Flexible Plastic Nozzle

Whether you are lubricating cutting tools or maintaining machinery in top operating condition, you will appreciate these High Pressure Oil Cans. Each can holds 5 ounces of oil and has a triggeractivated, high-pressure pump.

Figure 31. High Pressure Oil Cans.

order online at www.grizzly.com or call 1-800-523-4777

H7527—6" Rotary Table Set

Use this 6" Rotary Table in either the horizontal or vertical position for a variety of milling applications and with the set of dividing plates and adjustable tailstock, your milling applications are nearly unlimited. With 4° table movement per handle rotation and 20 second vernier scale, control is very accurate and precise. Also includes a 3/8" clamping set for the 4-slot table. Everything you need in one great set!

Figure 32. H7527 6" Rotary Table Set.

H9599—Machine Shop Trade Secrets G5053—The Home Machinist's Handbook

Excellent reference pages for novices and professionals alike. Each book is filled with drawings charts and tables for getting the most of your milling machine. Model H9599 has 320 pages. Model G5053 has 275 pages.

Figure 33. Great texts for mill/drills.

SB1348—South Bend® 8-Pc. R-8 Collet Set SB1349—South Bend® 16-Pc. R-8 Collet Set

Get true South Bend® quality and precision with one of these Quick-Change Collet Sets. Each set includes hardened and precision-ground spring collets for maximum holding power, collet chuck, spanner wrench, and protective moulded case.

Figure 34. Model SB1349 South Bend 16-Pc. R-8 Collet Set.

G7156—4" (35/8") Precision Milling Vise G7154—5" (41/2") Precision Milling Vise G7155—6" (55/8") Precision Milling Vise Swiveling Milling Vises feature perfectly aligned, precision ground jaws, large Acme® screws and

easy to read 0°-360° scales.

Figure 35. G7154 Precision Milling Vise.

G9760-20-PC, 2 & 4 Flute TiN End Mill Set.

Includes these sizes and styles in two and four flute styles: $^3/_{16}$ ", $^1/_4$ ", $^5/_{16}$ ", $^3/_8$ ", $^7/_{16}$ ", $^1/_2$ ", $^9/_{16}$ ", $^5/_8$ ", $^3/_8$ ", $^{11}/_{16}$ ", and $^3/_4$ ".

Figure 36. G9760 20-PC End Mill Set.

G5774—R-8 End Mill Holder Set

Hold various sized end mills in your R-8 spindle with this End Mill Holder Set. Includes holders for $\frac{3}{16}$ ", $\frac{3}{8}$ ", $\frac{1}{2}$ ", $\frac{5}{8}$ " and $\frac{3}{4}$ " end mills.

Figure 37. G5774 R-8 End Mill Holder Set.

G9612—Test Indicator

This Test Indicator has a 0.03" range in graduations of 0.0005", an easy-to-read dial, and a pivoting stylus that moves at right angles to the dial face.

Figure 38. G9612 Test Indicator.

G5641—1-2-3 Blocks G9815—Parallel Set

Blocks are square to within .0003". Measure 1" x 2" x 3". Parallel set measures 6" long by $\frac{1}{2}$ ", $\frac{5}{8}$ ", $\frac{3}{4}$ ", $\frac{7}{8}$ ", $\frac{11}{8}$ ", $\frac{11}{8}$ ", $\frac{11}{4}$ ", $\frac{11}{8}$ ", $\frac{13}{8}$ ", $\frac{11}{2}$ ", and $\frac{15}{8}$ ".

Figure 39. G5641 1-2-3 Blocks and G9815 Parallel Set.

H5930—4-Pc Center Drill Set 60° H5931—4-Pc Center Drill Set 82°

Double ended HSS Center Drills are precision ground. Includes sizes 1-4.

Figure 40. H5930 4-pc Center Drill Set 60°.

G3658—Titanium Drill Bits

Titanium nitride-coated bits last up to six times as long as uncoated bits. This 115-piece set features 29 fractional bits, from $\frac{1}{6}$ " to $\frac{1}{2}$ " in increments of $\frac{1}{64}$ ", letter bits from A–Z, and 60 number bits. Housed in rugged steel case.

Figure 41. G3658 Titanium Drill Bits.

order online at www.grizzly.com or call 1-800-523-4777

SECTION 6: MAINTENANCE

AWARNING

To reduce risk of shock or accidental startup, always disconnect machine from power before adjustments, maintenance, or service.

Schedule

For optimum performance from your machine, follow this maintenance schedule and refer to any specific instructions given in this section.

Daily Check:

- Loose mounting bolts.
- Damaged tooling.
- Worn or damaged wires.
- Clean debris and built up grime off of machine.
- Any other unsafe condition.

Every 8 Hours of Operation:

- Check/add headstock oil (Page 31).
- Lubricate ball oilers (Page 32).
- Lubricate table/column ways and quill (Page 32).

Every 40 Hours of Operation:

Lubricate table leadscrews (Page 33).

Every 90 Days of Operation:

- Lubricate quill rack and pinion (Page 33).
- Lubricate Z-axis leadscrew (Page 34).

Annually:

Change headstock oil (Page 31).

Cleaning and Protecting

Metal chips left on the machine will invite oxidation and a gummy residue build-up around the moving parts. Use a brush and shop vacuum to remove chips and debris from the working surfaces of the mill/drill. Never blow off the mill/drill with compressed air, as this will force metal chips deep into the mechanisms and may cause injury to yourself or bystanders.

Remove any rust build-up from unpainted cast iron surfaces of your mill/drill and treat with a non-staining lubricant after cleaning.

Keep unpainted cast iron surfaces rust-free with regular applications of ISO 68 way oil (see Page 27 for offerings from Grizzly).

Lubrication

An essential part of lubrication is cleaning the components before lubricating them.

This step is critical because grime and chips build up on lubricated components, which makes them hard to move. Simply adding more lubricant will not result in smooth moving parts.

Clean all exterior components in this section with mineral spirits, shop rags, and brushes before lubricating.

DISCONNECT MACHINE FROM POWER BEFORE PERFORMING LUBRICATION.

NOTICE

Follow reasonable lubrication practices as outlined in this manual. Failure to do so could lead to premature failure of your machine and will void the warranty.

Headstock Reservoir

Oil TypeModel T23962	or ISO 68 Equivalent
Oil Amount	
Check/Add Frequency	8 Hrs. of Operation
Change Frequency	Annually

The headstock has the proper amount of oil when the sight glass is halfway full (see **Figure 42**).

Figure 42. Headstock sight glass.

Tool Needed	Qty
Hex Wrench 8mm	1

To change the headstock oil:

- 1. Run the spindle at 670 RPM for approximately 10 minutes to warm the oil.
- 2. DISCONNECT MACHINE FROM POWER!
- **3.** Remove the fill plug (see **Figure 43**).

Figure 43. Headstock oil fill plug.

- **4.** Place a 1-gallon or larger drain pan on the table under the headstock.
- 5. Remove the drain plug (see **Figure 44**) from underneath the headstock. Allow the oil to completely drain into the pan.

Figure 44. Headstock drain plug (headstock tilted 90° for clarity).

NOTICE

Follow federal, state, and local requirements for proper disposal of used oil.

- **6.** Replace the drain plug.
- **7.** Add oil until the sight glass is halfway full, then replace the fill plug.
- **8.** Clean up any spilled oil to prevent slipping hazards.

Ball Oilers

Proper lubrication of ball oilers (shown in Figures 45–46) is done with a pump-type oil can that has a plastic or rubberized cone tip (see Page 27 for offerings from Grizzly). We do not recommend using metal needle or lance tips, as they can push the ball too far into the oiler, break the spring seat, and lodge the ball in the oil galley.

Figure 45. Y-axis ball oiler and ways.

Figure 46. X-axis ball oiler and ways.

Push the tip of the oil can nozzle against the ball oiler to create a hydraulic seal, then pump the oil can once or twice. If you see sludge and contaminants coming out of the lubrication area, continue pumping the oil can until the oil runs clear. When finished, wipe away the excess oil.

Table/Column Ways & Quill

Oil TypeModel T23962 or ISO 68 Equivalent Oil Amount.........Thin Coat Lubrication Frequency.......8 Hrs. of Operation

Refer to **Figures 45–48** to identify each component to lubricate.

Figure 47. Column ways.

Figure 48. Outside surface of the quill.

Use the component controls to access the entire length of the surfaces, then clean them with mineral spirits and shop rags.

When dry, apply a thin coat of oil to the surfaces. Move each component through the entire path of travel several times to distribute the lubricant.

Table Leadscrews

Oil TypeModel T23962 or ISO 68 Equivalent Oil Amount........Thin Coat Lubrication Frequency40 Hrs. of Operation

Move the table as necessary to access the entire length of the X- and Y-axis leadscrews (see **Figures 49–50**), then use mineral spirits, shop rags, and a brush to clean them.

Figure 49. X-axis leadscrew.

Note: Use a 4mm hex wrench to remove the way cover from the column and access the Y-axis leadscrew.

Figure 50. Y-axis leadscrew.

Use a clean brush to apply a thin coat of oil to the leadscrew threads, then move the table through the X- and Y-axis paths to distribute the oil.

Replace the way cover before connecting the machine to power.

Quill Rack & Pinion

Move the quill up and down to gain full access to the rack and pinion (see **Figure 51**), then clean the teeth with mineral spirits, shop rags, and a brush.

Figure 51. Quill rack and pinion.

Use a brush to apply a thin coat of grease to the teeth, then raise/lower the quill several times to distribute the grease.

Note: Re-apply oil to the smooth outside surface of the quill that was removed during the cleaning process.

Z-Axis Leadscrew

Oil TypeNLGI#2 Grease or Equivalent Oil Amount.....Thin Coat Lubrication Frequency90 Days of Operation

Using a 5mm hex wrench, remove the rear column cover to access the Z-axis leadscrew and worm gear (see **Figure 52**).

Figure 52. Z-axis leadscrew and worm gear exposed.

Use mineral spirits, shop rags, and a brush to clean away the old grease from the leadscrew threads and the worm gear teeth.

Use a brush to apply a thin coat of grease to the threads and teeth, then raise/lower the headstock several times to distribute the grease.

Note: Replace the rear column cover before reconnecting the machine to power.

SECTION 7: SERVICE

Review the troubleshooting and procedures in this section if a problem develops with your machine. If you need replacement parts or additional help with a procedure, call our Technical Support at (570) 546-9663. **Note:** *Please gather the serial number and manufacture date of your machine before calling.*

Troubleshooting

Symptom	Possible Cause	Possible Solution
Machine does not start.	Emergency stop button depressed.	Twist emergency stop button clockwise until it pops out to reset it.
	2. Plug at fault or wired incorrectly.	Ensure plug is not damaged and is wired correctly.
	3. Incorrect power supply voltage.	Ensure power supply voltage matches circuit requirements (Page 11).
	4. Wall fuse/circuit breaker is blown/tripped.	Ensure circuit size is correct and a short does not exist. Reset breaker or replace fuse.
	5. Wiring is open/has high resistance.	Check for broken wires or disconnected/corroded connections; repair/replace as necessary.
	6. Motor wired incorrectly.	6. Ensure motor wiring is correct (Page 43).
	7. Control panel buttons at fault.	7. Ensure each button is wired correctly; replace if at fault (Page 42).
	8. Motor or motor components are at fault.	8. Test/repair/replace.
Machine stalls or is	Feed rate/cutting speed too fast.	Decrease feed rate/cutting speed.
overloaded.	2. Wrong cutter type.	2. Use the correct cutter for the task.
	3. Machine is undersized for the task or	3. Use smaller or sharper tooling; reduce feed rate or
	tooling is incorrect for the task.	spindle speed; use cutting fluid if possible.
	4. Motor has overheated.	4. Clean off motor, let cool, and reduce workload.
	5. Motor wired incorrectly.	5. Ensure motor wiring is correct (Page 43).
	6. Motor bearings are at fault.	6. Test by rotating shaft; rotational grinding/loose shaft requires bearing replacement.
	7. Motor or motor components are at fault.	7. Test/repair/replace motor.
Machine has vibration or noisy	Motor or machine component is loose.	Inspect/replace stripped or damaged bolts/nuts, and re-tighten with thread locking fluid.
operation.	2. Workpiece not secure.	2. Properly clamp workpiece on table or in vise.
	3. Excessive depth of cut.	3. Decrease depth of cut.
	4. Cutter/tooling is loose.	4. Make sure tooling is properly secured.
	5. Cutter is dull or at fault.	5. Replace/resharpen cutter.
	6. Bit is chattering.	6. Replace/sharpen bit; index bit to workpiece; use appropriate feed rate and cutting RPM.
	7. Machine is incorrectly anchored to floor or sits unevenly.	7. Tighten/replace anchor bolts; relocate/shim machine.
	8. Motor fan is rubbing on fan cover.	8. Replace dented fan cover or damaged fan.
	9. Motor bearings are at fault.	Test by rotating shaft; rotational grinding/loose shaft requires bearing replacement.

Symptom	Possible Cause	Possible Solution
Tool loose in spindle.	Tool is not fully drawn up into spindle taper.	1. Tighten draw bar.
	2. Debris on tool or in spindle taper.	2. Clean collet and spindle taper.
	3. Taking too big of a cut.	3. Lessen depth of cut and allow chips to clear.
Breaking tools or cutters.	Spindle speed/feed rate is too fast.	Set spindle speed correctly (Page 25) or use slower feed rate.
	2. Cutting tool too small.	Use larger cutting tool and slower feed rate.
	3. Cutting tool getting too hot.	3. Use coolant fluid or oil for appropriate application.
	4. Taking too big of a cut.	4. Decrease depth of cut.
	5. Spindle extended too far down.	Fully retract spindle and lower headstock. This increases rigidity.
Workpiece vibrates or	1. Table locks not tight.	Tighten down table locks.
chatters during operation.	2. Workpiece not secure.	2. Properly clamp workpiece on table or in vise.
	3. Spindle speed/feed rate is too fast.	Set spindle speed correctly (Page 25) or use a slower feed rate.
	4. Spindle extended too far down.	4. Fully retract spindle and lower headstock. This
		increases rigidity.
Table is hard to move.	Table locks are tightened down.	Make sure table locks are fully released.
	2. Chips have loaded up on ways.	Frequently clean away chips that load up during operations.
	3. Ways are dry and need lubrication.	3. Lubricate ways (Page 32).
	4. Table limit stops are interfering.	4. Check to make sure that all table limit stops are not in the way.
	5. Gibs are too tight.	5. Adjust gibs (see Page 37).
Bad surface finish.	Spindle speed/feed rate is too fast.	Set spindle speed correctly (Page 25) or use a slower feed rate.
	2. Using a dull or incorrect cutting tool.	Sharpen cutting tool or select one that better suits the operation.
	3. Wrong rotation of cutting tool.	3. Check for proper cutting rotation for cutting tool.
	4. Workpiece not secure.	4. Properly clamp workpiece on table or in vise.
	5. Spindle extended too far down.	5. Fully retract spindle and lower headstock. This
		increases rigidity.
Cutting results not square.	Table and spindle are not at 90° to each other.	1. Tram the spindle (Page 38).

Adjusting Gibs

Gibs are tapered lengths of metal that are sandwiched between two moving surfaces. Gibs control the gap between these surfaces and how they slide past one another. Correctly adjusting the gibs is critical to producing good results.

Correctly positioning gibs is a matter of trial and error and patience. Tight gibs make table movement more accurate but stiff. Loose gibs make table movement sloppy but easier to do. The goal of gib adjustment is to remove unnecessary sloppiness without causing the ways to bind.

Many experienced machinists adjust the gibs just to the point where they can feel a slight drag in table movement.

Screws on each end of the gib allow gib adjustment to increase or decrease the friction between the sliding surfaces.

DISCONNECT MACHINE FROM POWER BEFORE ADJUSTING THE GIBS!

Make sure all table locks are loose. Then, loosen one gib adjustment screw (see **Figure 53**) and tighten the opposing screw the same amount to move the gib, while at the same time rotating the handwheel to move the table until you feel a slight drag in that path of movement.

Figure 53. Location of table gib screws.

Adjusting Leadscrew Backlash

Leadscrew backlash is the amount of freeplay movement in the leadscrew (when the leadscrew moves but the table does not) after changing the direction of rotation.

Leadscrews must have a certain amount of backlash to rotate easily, but over time, it increases with wear. Generally, 0.003"-0.006" leadscrew backlash is acceptable to ensure smooth movement and reduce the risk of premature thread wear.

The X- and Y-axis leadscrew backlash is adjusted using a long 4mm hex wrench to tighten/loosen the cap screw on the leadscrew nut. This adjusts the force the leadscrew nut exerts on the leadscrew threads.

The X-axis leadscrew nut shown in **Figure 54** is accessed from underneath the left side of the table.

The Y-axis leadscrew nut is similar and is accessed from inside the cabinet underneath the machine base.

Figure 54. Location of X-axis leadscrew nut for adjusting backlash.

Tramming Spindle

When your operation requires that the spindle axis be precisely perpendicular to the table, you must tram the spindle with the table. Simply adjusting the headstock tilt to the 90° mark on the tilt scale will not be precise enough for highly accurate results.

This procedure involves mounting a dial indicator to the quill or spindle, rotating it around the table, and adjusting the head position so that the spindle axis is 90° to the table X-axis, as illustrated in **Figure 55**.

Figure 55. Spindle centerline properly trammed to the table.

Note: Keep in mind that the top surface of your workpiece will not likely be exactly parallel with the table top. Depending on your operation, you may choose to tram the spindle to the top surface of the workpiece after it is mounted instead of tramming to the table.

Tools Needed Qty	
Dial Indicator (with at least 0.0005" resolution). 1	
Indicator Holder (mounted on quill/spindle) 1	
Precision Parallel Block (1-2-3 Blocks)1	

Note: A precision-ground plate can be substituted for the parallel block. The farther the indicator point can be placed from the spindle axis, the more accurate the alignment measurements will be.

To tram the spindle with the table:

- DISCONNECT MACHINE FROM POWER!
- **2.** Prepare machine by performing the following tasks:
 - —Stone table to remove all nicks and burrs, then clean off all debris. Verify table is clean by running your hand over the top of it.
 - —Position table for the operation you intend to perform after tramming—preferably centered with saddle.
 - —Tighten any table locks that should be tight during intended milling operation.
- **3.** Place parallel block underneath spindle.
- 4. Install indicator holder into spindle or onto quill, then mount indicator onto it so that the point is as parallel to the block as possible (see the illustration in **Figure 56** for an example).

Figure 56. Dial indicator mounted.

 Place the parallel block directly under spindle and indicator across length of table, as illustrated in Figure 57.

Note: If you must re-position quill to accommodate the above step, then review tasks in **Step 2** to make sure mill is properly prepared for tramming.

Figure 57. Setup for the X-axis adjustment.

Note: Generally, the goal is to get the difference of the indicator readings between ends of the parallel bar down to 0.0005". However, the acceptable variance will depend on the requirements for your operation.

- Rotate spindle by hand so that the indicator point rests on one end of parallel block, as illustrated in Figure 57, then zero dial.
- Rotate spindle so that the indicator point rests in the same manner on other end of block, then read dial.
 - —If indicator dial still reads zero or is within the acceptable variance, continue on with Step 8.
 - —If indicator dial has moved from zero beyond the acceptable variance, you will need to compensate for that amount by tilting head left or right. Repeat **Steps 6–7** until you are satisfied with spindle axis alignment along table X-axis.

Tip: Keep one of the tilting hex nuts snug so that the head does not move loosely while you adjust it in small amounts.

Re-tighten tilting hex nuts.

Replacing Power Feed Carbon Brushes

The X-axis power feed motor has a carbon brushes that will wear with normal use. There is one on the top of the power feed (see **Figure 58**) and one on the bottom.

Figure 58. Carbon brush removed from power feed.

If, over time, the power feed starts to seem sluggish or will not operate, check the carbon brushes. If they are less than 3/16" in length, replace them with new ones (Part No. P0755501-6).

Note: For proper performance, replace both carbon brushes at the same time.

Use a flat screwdriver to unthread (turn counterclockwise) the cap covering the carbon brush, replace the brush assembly, then secure it with the cap.

Tightening Return Spring Tension

The return spring moves the spindle back up when the coarse downfeed handles are released. The tension of this spring was adjusted at the factory, but it may need to be tightened during the life of the mill/drill.

Important: Do not perform this procedure unless it is absolutely necessary.

During this procedure, you will loosen the spring cover thumb screw (See **Figure 59**) just enough to pull the cover back to clear the roll pin, then rotate the cover counterclockwise to fit the roll pin in the next slot.

Figure 59. Return spring components.

AWARNING

If the return spring should come loose from the spring cap and rapidly unwind, laceration or impact injuries could occur. Always wear heavy leather gloves and safety glasses when adjusting the return spring tension.

To adjust the return spring tension:

- DISCONNECT MACHINE FROM POWER!
- 2. Wipe off any oil on spring cover so it does not slip when you hold it during adjustments.
- **3.** Mark slot on cover that engages the roll pin at the top—this is the factory setting.
- **4.** Put on heavy leather gloves to protect your hands from lacerations if spring uncoils during next step.

Note: Keep a good grip on spring cover during next step. Letting go of cover when roll pin is not engaged will cause spring to rapidly uncoil.

- 5. While holding spring cover against side of headstock so the spring will not unwind, loosen thumb screw approximately 1/4".
- **6.** Pull cover out to disengage it with roll pin, then rotate it counterclockwise to engage roll pin in the next slot in cover.
- **7.** Re-tighten thumb screw to secure setting.

SECTION 8: WIRING

These pages are current at the time of printing. However, in the spirit of improvement, we may make changes to the electrical systems of future machines. Compare the manufacture date of your machine to the one stated in this manual, and study this section carefully.

If there are differences between your machine and what is shown in this section, call Technical Support at (570) 546-9663 for assistance BEFORE making any changes to the wiring on your machine. An updated wiring diagram may be available. **Note:** Please gather the serial number and manufacture date of your machine before calling. This information can be found on the main machine label.

▲WARNING Wiring Safety Instructions

SHOCK HAZARD. Working on wiring that is connected to a power source is extremely dangerous. Touching electrified parts will result in personal injury including but not limited to severe burns, electrocution, or death. Disconnect the power from the machine before servicing electrical components!

MODIFICATIONS. Modifying the wiring beyond what is shown in the diagram may lead to unpredictable results, including serious injury or fire. This includes the installation of unapproved aftermarket parts.

WIRE CONNECTIONS. All connections must be tight to prevent wires from loosening during machine operation. Double-check all wires disconnected or connected during any wiring task to ensure tight connections.

CIRCUIT REQUIREMENTS. You MUST follow the requirements at the beginning of this manual when connecting your machine to a power source.

WIRE/COMPONENT DAMAGE. Damaged wires or components increase the risk of serious personal injury, fire, or machine damage. If you notice that any wires or components are damaged while performing a wiring task, replace those wires or components.

MOTOR WIRING. The motor wiring shown in these diagrams is current at the time of printing but may not match your machine. If you find this to be the case, use the wiring diagram inside the motor junction box.

CAPACITORS/INVERTERS. Some capacitors and power inverters store an electrical charge for up to 10 minutes after being disconnected from the power source. To reduce the risk of being shocked, wait at least this long before working on capacitors.

EXPERIENCING DIFFICULTIES. If you are experiencing difficulties understanding the information included in this section, contact our Technical Support at (570) 546-9663.

WARRANTY & RETURNS

Grizzly Industrial, Inc. warrants every product it sells for a period of **1 year** to the original purchaser from the date of purchase. This warranty does not apply to defects due directly or indirectly to misuse, abuse, negligence, accidents, repairs or alterations or lack of maintenance. This is Grizzly's sole written warranty and any and all warranties that may be implied by law, including any merchantability or fitness, for any particular purpose, are hereby limited to the duration of this written warranty. We do not warrant or represent that the merchandise complies with the provisions of any law or acts unless the manufacturer so warrants. In no event shall Grizzly's liability under this warranty exceed the purchase price paid for the product and any legal actions brought against Grizzly shall be tried in the State of Washington, County of Whatcom.

We shall in no event be liable for death, injuries to persons or property or for incidental, contingent, special, or consequential damages arising from the use of our products.

To take advantage of this warranty, contact us by mail or phone and give us all the details. We will then issue you a "Return Number," which must be clearly posted on the outside as well as the inside of the carton. We will not accept any item back without this number. Proof of purchase must accompany the merchandise.

The manufacturers reserve the right to change specifications at any time because they constantly strive to achieve better quality equipment. We make every effort to ensure that our products meet high quality and durability standards and we hope you never need to use this warranty.

Please feel free to write or call us if you have any questions about the machine or the manual.

Thank you again for your business and continued support. We hope to serve you again soon.
